

Make the switch

Get year-round comfort and savings with an electric heat pump

Heat pumps offer efficient, economical, and environmentally friendly home temperatures year-round by providing both heating and cooling in a single system. PSE is helping local customers upgrade their home heating and cooling systems by switching to an efficient electric heat pump.

- Save **\$8,000** when you replace your gas-powered heating system with a qualifying electric heat pump
- This rebate is only for PSE customers in the **Duvall area** with a zip code of 98014 or 98019

Visit [PSE.com/DuvallHeatPump](https://www.pse.com/DuvallHeatPump) to learn more about this limited-time offer.

The benefits of upgrading

- **Year-round comfort:** You'll get both efficient heating and cooling in a single system, plus quieter operation than traditional heating systems
- **It's affordable and efficient technology:** Cut electricity use by up to 50% compared to electric furnaces and baseboard heaters, along with superior cooling compared to window and central AC units.
- **Improved air quality:** Heat pumps not only operate efficiently with a light carbon footprint, but also filter and dehumidify air.
- **They're convenient and customizable:** Most models can be controlled by remote, mobile app, or smart thermostat.

Choose the ideal system

Ducted heat pumps:

Utilize existing or new ductwork to evenly heat or cool your home. Connected to an outdoor compressor (similar to an outside AC unit), they replace traditional central systems like furnaces or furnaces with AC.

Ductless heat pumps:

Also called mini-splits, they are ideal for homes without ducting or with incompatible ductwork. They offer flexibility in installation and allow you to have each indoor unit set at a different temperature for individualized comfort.
